Profile

IT Support Coordinator at Merivale, supporting network infrastructure and 450+ POS machines at Allianz Stadium and the SCG under SLA-driven conditions on event days. Also work as a freelance web developer: co-built Taropeuta, a live bilingual booking platform used by a real business, and currently building a website for a café. Seeking an entry-level Data, BI or technical role that brings together hands-on IT experience and data.

Experience

IT Support Coordinator Sydney, NSW
Merivale

- Look after 450+ POS machines at Allianz Stadium and the Sydney Cricket Ground: checks before each event, software updates, and on-site fixes during games (frozen screens, printers)
- Support network infrastructure and POS systems on major event days, including AFL matchdays at the SCG with crowds of 40,000+
- Resolve incidents within SLA targets using step-by-step troubleshooting, and work with internal teams and third-party vendors to keep support running smoothly

Freelance Web Developer Sydney, NSW
Self-employed

- Built with a teammate Taropeuta (taropeuta.vercel.app), a live bilingual (PT/EN) booking platform for a tarot and astrology business, using Next.js, React, Supabase and Stripe, deployed on Vercel
- Built the booking flow end to end: service catalogue, five pricing tiers, client intake and automatic timezone conversion, replacing manual scheduling over WhatsApp
- Added a mobile-first layout and privacy controls that let clients export or delete their personal data
- Currently building a website for a café

Bartender Ireland and Australia
Bars, restaurants, festivals and stadium events

- Served large drink orders fast and accurately in high-volume bars, during peak trading and busy event nights
- Ran the POS, handled cash and card payments and reconciled the till at close

Projects

FIEL – Football Intelligence Engine, Live | *Azure AI Foundry, MCP*

- Team of two for the Microsoft x Premier League *Inside the Game* Developer Hackathon
- Built the engine side: synthetic match data generator, tactics engine, API, MCP server, match memory and deployment; designed the agent orchestrator with my teammate

Smart Bar Pairing Assistant | *Python, Streamlit, pytest, GitHub Actions* | repo

- Small recommender that helps bar staff compare drinks by flavour: pick one drink and the app returns the closest Classic, Signature and Non-Alcoholic option, with a short explanation
- Scores each drink on five flavour attributes and ranks matches with cosine similarity; the CSV is validated first and the engine is tested with pytest in a CI pipeline

Education

Academy of Interactive Technology (AIT) Sydney, NSW
Bachelor of Information Technology *Expected May 2027*
Universidade Estadual de Campinas (Unicamp) Brazil
Electrical Engineering – not completed

Leadership & Involvement

Google Developer Group (GDG) Sydney – regular attendee
TEDx São Paulo – volunteer
51st Brazilian Symposium on Operational Research – volunteer
General Business Program (108 hrs), Market Sizing (6 hrs) | *Business Training Company, Brazil*

Technical Skills

Development: Java (OOP), JavaScript, React, Next.js, HTML/CSS, REST APIs, Git & GitHub, GitHub Actions (CI/CD), GitHub Pages, Vercel
Data: Python (pandas, NumPy, matplotlib), SQL (SQLite), Streamlit, data cleaning and visualisation, Monte Carlo simulation
Methods: SDLC, UML modelling, requirements gathering, user research and surveys, Gantt / PERT planning
Spoken Languages: English (professional), Portuguese (native)
